Introduction and context

Introduction

Put simply, networks are a group or system of interconnected people or things. They can play many roles in healthcare delivery: driving change and collaboration across complex organisational structures; enabling the best service for patients and staff, and uniting professionals with common clinical interests.

Networks, if effectively supported and harnessed, can offer solutions to tackling systemic and complex problems faced by an NHS beholden to financial pressures and chronic staff shortages.

The Quality Standard for Imaging Networks (QSIN) is consistent with the national direction to develop imaging networks. Imaging networks have been developed throughout the UK with 22 network regions in England, five in Scotland and one network each for Northern Ireland and Wales. An imaging network may also be formed by

a company to oversee all the imaging departments it has or an informal group of imaging entities who want to form a network.

Although these imaging network quality standards have been published independently from the [Quality Standard for Imaging 2021 \(QSI 2021\)](#), it is envisaged that, as imaging networks develop, the QSIN will be an integral part of the QSI.

The QSIN is made up of a number of quality statements which are aimed to complement QSI 2021.

Scope of the Quality Standard for Imaging Networks

The QSIN is written to stand alone; and emerging or nascent networks can use it as part of an internal quality improvement programme. All processes developed for quality improvement should be embedded and in routine use to achieve a culture of quality. While led from the top of the service, a culture of quality is everyone's responsibility.

These standards are designed to encourage all services to become part of an imaging network, with the benefits of mutual support and learning this brings.

The QSIN will be reviewed and refreshed regularly in line with QSI.

Aims

The Quality Standard for Imaging Networks (QSIN) is designed to encourage all services to become part of an imaging network, with the benefits of mutual support and learning this brings. It aims to help both existing and emerging networks drive forward quality improvement across multiple sites for the benefit of patients. It requires a culture of quality and vision for best practice.

Implementation of these standards could take several different forms:

1

Bottom up:

Where most sites within the network are already [QSI](#) accredited or eligible for accreditation. The network will collate and share best practice across all sites and facilitate standardisation of practice. This will ensure the best possible service for patients and smooth transition of care between the sites.

2

Top down:

Where most, if not all sites, are yet to engage with QSI. The network can provide leadership and support to sites to start their QSI journey and implement examples of best practice. They can facilitate relationships with QSI accredited sites/networks.

3 Mixed engagement:

Some sites have engaged with QSI and are at various stages of the journey, as well as some sites yet to engage at all. The network will facilitate the sharing of best practice and identify ways to standardise care across sites. They can facilitate mentor relationships between sites to help each other progress through QSI.

QSI leads

We recommend that every site designates a QSI lead to coordinate and drive forward the work to meet the QSI. Networks may choose to appoint a supplementary QSI lead or utilise one of the existing site leads to act as a liaison between sites and coordinate work for the network standards. This will be dependent on local circumstances and available resources. However, it is important that the leads are not overburdened and that there is buy-in from all staff to facilitate quality improvement.

Definitions

The term used continuously throughout the QSI in respect of a person attending for an imaging investigation, examination or study is 'patient'. Someone who attends with a patient to provide support is referred to as the patient's 'carer', and this term will also include a patient's representative. In some other specialties and guidance, the term 'service user' is often used to refer to a patient, but in imaging services, the term 'service user' can also be used in respect of a clinician making a referral. The terms 'patient' and 'carer' are therefore used to avoid doubt.

In these standards the term 'clinician' is used in the widest context to mean an appropriately clinically qualified person. It may therefore include radiographic and nursing staff and is not restricted to medical staff.

Quality Standard (QS)

Each standard describes the service quality required in the quality statement.

Quality statement

A required or agreed definition of quality to be achieved. A quality statement must be unambiguous, objective and measurable.

Audit

Frequency of audit is not stated, but audits should be sufficiently frequent to provide assurance for the service.

Guideline

This sets out recommendations for best practice in a particular process or application. Written by professional bodies or similar organisations of high regard, guidelines should have been peer reviewed. Guidelines are not mandatory, but they reflect the professionally agreed best practice. Clinical guidelines do not replace professional judgement and discretion.

Protocol

A document laying down in precise detail the tests or steps that must be performed. Agreed by the service or organisation, it provides direction for the healthcare professional. Note that within the *Ionising Radiation (Medical Exposure) Regulations 2017/2018 (IR(ME)R)* the term 'protocol' has a very distinct meaning. In this QS, the term protocol is used in its non-IR(ME)R context.

Policy

This sets out the service expectation and organisational mandatory requirements for areas of practice or approaches. A policy is formally agreed by the service or provider governance processes.

Pathway

This describes the multidisciplinary approach for patients, usually in a disease-specific care journey. Often accompanied by a visual graphic that is easy to follow, it should encompass a journey of care for a patient group. Multiple guidelines, policies and protocols may sit within one pathway of care.

Standard operating procedure (SOP)

A document that sets out in a step-by-step approach the way the organisation expects a procedure, protocol or process to be followed.

Imaging procedure

For the purposes of this standard, the term imaging procedure is used throughout the document. This could refer to the whole process in its entirety from referral to production of report. Services should interpret the term in context with the particular quality statement and service that they deliver.

Terms of Reference (ToR)

A document which defines the purpose and structure of the network, see IN-201 for more guidance.

Structure of the Quality Standard

Quality Standards Reference Structure

Quality standard reference numbers have the following structure:

Each standard is structured as follows:

Reference number (Ref)	This column contains a unique reference number for each quality statement and is used for all cross-referencing.
Quality standard (QS)	<p>Standard name This describes how the quality statement will be known.</p> <p>Quality statement The quality statement describes the service quality required.</p> <p>Outcome measure The outcome measure describes the expected high-quality achievement.</p> <p>Indicative inputs The indicative inputs describe what a service should do to achieve the QS</p> <hr/> <p>Notes: <i>The notes give more detail about either the interpretation or the applicability of the quality standard. The notes are prompts designed for the review team, the service and stakeholders.</i></p>

Service Letters

These quality statements use the pathway letters **IN**, and the sections cover the following topics:

IN-	Imaging Network
IN-1	Involving Patients and Carers
IN-2	Workforce
IN-3	Network Equipment and Procurement
IN-5	Guidelines
IN-6	Network Organisation
IN-7	Network Assurance

Imaging Network Quality Standard

Involving Patients and Carers

Workforce	
Ref	Standard
IN-202	<p>Education and Development</p> <p>Quality statement An agreed network programme of education and development is in place.</p> <p>Outcome measure The network can demonstrate that there is a multidisciplinary education and development programme agreed by the network.</p> <p>Indicative inputs</p> <ul style="list-style-type: none"> – There should be evidence of an agreed network-wide programme of multidisciplinary education and development. – The education and development programme should be reviewed annually to ensure it is consistent with the needs of the network member organisations. – Attendance lists at education and development programmes should be maintained. Attendance levels should be reviewed by the network and equity of access ensured. – Evaluation of programmes should be undertaken. <p>Notes:</p> <ol style="list-style-type: none"> 1. <i>This QS also links to Quality Standard for Imaging XR-204 and XR-704 and can be used as part of a service's compliance with these Qs.</i> 2. <i>The design and content of the programme are not subject to review, other than to ensure that the programme is consistent with the network's stated requirements and individuals' own professional development requirements.</i> 3. <i>Networks should work closely with imaging academies to provide training where appropriate.</i>

Workforce	
Ref	Standard
IN-203	<p>Workforce Strategy</p> <p>Quality statement An agreed network workforce strategy is in place.</p> <p>Outcome measure The network can demonstrate that there is an agreed network workforce strategy (linked to the demand and capacity plan (IN-602)) which is evaluated regularly.</p> <p>Indicative inputs</p> <ul style="list-style-type: none"> - The workforce strategy should be clearly described. - The strategy should be developed with all members of the network. - The strategy should address as a minimum: <ul style="list-style-type: none"> a. Recruitment, retention and demand requirements b. Development of extended roles c. Options for implementing flexible working arrangements between different providers organisations in the network - The strategy should consider place of work, including remote or homeworking if relevant, and include access to workstations and technology. - Network meeting minutes/notes should be distributed to members of the network. - There should be an action plan for delivery of the strategy, including timeframes for completion. The action plan should include progress on deliverables and be reviewed regularly. - Workforce plans should demonstrate a link to education and training providers, such as imaging academies, where appropriate. <p>Notes:</p> <ol style="list-style-type: none"> 1. <i>Future plans should consider the likely requirements for a five-year period.</i> 2. <i>The workforce action plan should demonstrate progress made. The existence of an action plan without progression is not sufficient to meet this QS.</i> 3. www.england.nhs.uk/wp-content/uploads/2022/04/B0418_Diagnostic-imaging-network-workforce-guidance_April-2022.pdf 4. <i>For implementing flexible working (indicative input C.) reviewers may wish to consider a 'Staff Passport' similar to the Digital staff passport - NHS Transformation Directorate (england.nhs.uk).</i>

Network Equipment and Procurement

Ref	Standard
<p>IN-301</p>	<p>Equipment and Procurement</p> <p>Quality statement Imaging equipment is available to meet the needs of the network population.</p> <p>Outcome measure The network can demonstrate imaging equipment within the network is sufficient to deliver the expected number of diagnostic and interventional procedures for the usual case mix of patients in the network within expected timescales.</p> <p>Indicative inputs</p> <ul style="list-style-type: none"> - All Imaging assets with the network are procured collaboratively demonstrating economies of scale can be utilised - An agreed imaging network asset ownership policy is in place - There is a network owned asset register and a network risk register with regards to imaging equipment - There is an imaging asset replacement programme with indicative dates. There should be an agreed network disposal programme. - There should be a network agreed risk management plan of imaging equipment used beyond its replacement date. This should link to the risk register and replacement programme. - There should be streamlining of IT systems to ensure effective collaboration. AI should be implemented and managed using agreed policies and procedures across the whole network. - An agreement for the management of network owned imaging equipment with all services within the network including their maintenance, breakdown plans and monitoring of failures and faults. - Equipment management records should be kept by the network covering as a minimum: <ol style="list-style-type: none"> a. Procurement and management of imaging equipment across the network. b. Installation acceptance and testing. c. Calibration, operation and maintenance of equipment.

Network Equipment and Procurement

Ref	Standard
IN-301 (cont)	Notes: <ol style="list-style-type: none"><li data-bbox="395 517 1278 589">1. <i>This QS is to ensure collaboration between services within a network to ensure that patients experience reduced delays and cancellations.</i><li data-bbox="395 607 1190 678">2. <i>Where networks own equipment QSI standards XR-301; XR-302; XR-303 and XR-401 should be consulted and adhered to.</i><li data-bbox="395 696 1114 768">3. <i>Where equipment is on the risk register there should be a plan to rectify the situation as soon as possible.</i><li data-bbox="395 786 1278 857">4. <i>Reviewers should discuss with the services the sustainability and environmental impact of equipment and facilities' purchasing decisions.</i>

Guidelines	
Ref	Standard
IN-501	<p>Network-wide Clinical Guidelines</p> <p>Quality statement Agreed network clinical guidelines are in place.</p> <p>Outcome measure Guidelines covering a range of common pathways or processes are agreed for use in services across the network.</p> <p>Indicative inputs</p> <ul style="list-style-type: none"> - Network clinical guidelines should include but not be limited to: <ul style="list-style-type: none"> a. Referral management b. Common referral pathways c. Image optimisation d. Image reporting e. Access to specialised services f. Community diagnostic centres g. Ionising and non-ionising radiation safety - There should be evidence of network meeting minutes, showing that guidelines have been agreed, reviewed and distributed. - The agreed network guidelines should be audited to demonstrate compliance (QS IN-702). - There is a strategy for implementing machine learning algorithms across the network. <p>Notes:</p> <ol style="list-style-type: none"> 1. <i>Guidelines/protocols should be based on national guidance and the commissioned local pathways. Implementation of these guidelines at local level is covered in the QSI 2021 (QS XR-501 to XR-517 and the Modality Standards).</i> 2. <i>The development of guidance and protocols agreed across the network reduces variation in practice and supports system information sharing.</i>

Network Organisation	
Ref	Standard
IN-601	<p>Network Organisation</p> <p>Quality statement The network has defined governance arrangements in place.</p> <p>Outcome measure An imaging network is in place with defined governance arrangements to ensure network business can be addressed.</p> <p>Indicative inputs</p> <ul style="list-style-type: none"> – An imaging network (see note 1) consisting of representatives from imaging services, commissioners and other key stakeholders should meet regularly to discuss latest national guidance, opportunities for joint working locally, service provision and learning. – A clear accountability framework and risk management mechanism, including meeting structure, should be in place for reporting at network executive level. – There should be agreed hosting arrangements for the network. – The network should have an annually agreed programme of work. – Terms of reference (ToR) for the network board and subgroups should be agreed, including the quorum for meetings agreed by the network membership. – There should be arrangements for liaising with local care systems. – There should be arrangements for liaising with disease-specific clinical networks locally and regionally. – There should be evidence of meeting agendas and notes, and distribution arrangements. <p>Notes:</p> <ol style="list-style-type: none"> 1. <i>A network is made up of the network board and delegated groups responsible to the network board.</i> 2. <i>The network ToR should outline how meetings are hosted and how often meetings are held, but the frequency of meetings is less important than the quality of discussion.</i> 3. <i>All imaging services within the network area, whether they are NHS or independent sector providers and regardless of the size of the service, should be included (or at least invited to participate).</i> 4. <i>It is encouraged that a patient or lay person is included in the governance structure. (IN-101)</i> 5. <i>NHS England guidance for commercial structure and operational governance: www.england.nhs.uk/publication/diagnostic-imaging-network-commercial-structure-and-operational-governance-guide/</i>

Network Organisation

Ref	Standard
<p>IN-602</p>	<p>Network Capacity and Demand Evaluation</p> <p>Quality statement There is formal capacity and demand modelling for services across the network.</p> <p>Outcome measure There is an agreed capacity and demand plan which is evaluated regularly at network meetings.</p> <p>Indicative inputs</p> <ul style="list-style-type: none"> – There should be an agreed plan that identifies the current and future capacity and demand for services across the network, including diagnostic centres, where appropriate. – The capacity and demand plan should include details of equipment, workforce and reporting requirements across the network. – Notes from network meetings, where these plans are discussed, should be shared with network members. – The network should have assessed its informatics capability to inform the evaluation, and ensure it has access to individuals or a team with the appropriate competencies. (See note 3) – Plans should consider both the requirements and the impact on delivery models across the network. – Plans should demonstrate a link to workforce plans (QS IN-203). – Patients should be an integral part of developing capacity and demand plans, especially with regards to future requirements (QS IN-101). – Plans should consider referral pathways for rarer or complex pathways. <p>Notes:</p> <ol style="list-style-type: none"> 1. <i>The evaluation schedule should be determined in the ToR.</i> 2. <i>Capacity and demand should be determined using a recognised model such as NHS England: www.england.nhs.uk/ourwork/demand-and-capacity/models/ and tool kit: www.england.nhs.uk/ourwork/demand-and-capacity/models/diagnostic-imaging-capacity-and-demand-tool/</i> 3. <i>Capacity and demand plans should be more than the sum of current activity and should consider the likely requirements for a five-year period.</i> 4. <i>Appropriate competencies may be achieved by bringing together individuals from more than one provider organisation.</i> 5. <i>Equipment includes IT and AI. (IN-301)</i>

Network Organisation	
Ref	Standard
IN-603	<p>Service Development and Improvement Plan</p> <p>Quality statement There is a five-year development and improvement plan in place.</p> <p>Outcome measure The network is able to demonstrate improvements in service provision over the five years.</p> <p>Indicative inputs</p> <ul style="list-style-type: none"> – The network should be able to demonstrate an agreed development and improvement plan that sets out its programme. – The network should be able to demonstrate how the five-year plan aligns with the network provider organisations' long-term delivery plans. – The service development and improvement plan should be aligned to the workforce and capacity and demand plans (QS IN-203 and IN-602). – The network has clearly defined vision and set of values. <p>Notes:</p> <ol style="list-style-type: none"> 1. Reviewers should ask about the process of developing this plan. 2. Reviewers should ask about the engagement of patients and their carers in the development of the plan (QS IN-101). 3. Reference QSI 2021 five-year plan XR-605. 4. Vision and values should be embedded into the Network Leadership. (IN-201)

APPENDIX

Glossary of Terms and Abbreviations for QSI and QSIN

Advocacy	Advocacy means to speak up for someone. It is about making things change because people's voices are heard and listened to. It's about making sure that people can make their own choices in life and have the chance to be as independent as they want to be.
ARSAC	Administration of Radioactive Substances Advisory Committee. ARSAC advises the licensing authorities on applications from practitioners, employers and researchers who want to use radioactive substances on people.
BI	Background information to review team. (Identified evidence sources within the QSI).
BMUS	British Medical Ultrasound Society.
Carer	Throughout the quality statements the term 'carer' applies to both family carers and paid carers or support workers.
CCG	Clinical Commissioning Group.
CNR	Case note review or clinical observation. (Identified evidence sources within the QSI).
COR	College of Radiographers. The professional arm of the Society and College of Radiographers.
CQC	The Care Quality Commission is the independent regulator of health and social care in England.
DEXA	Dual-energy X-ray absorptiometry. A bone density scan using X-rays.
DH	Department of Health.
Doc	Documentation should be available. Documentation may be in the form of a website or other social media. (Identified evidence sources within the QSI).
EASR	Environmental Authorisations (Scotland) Regulations 2018.
eGFR	Estimated glomerular filtration rate. A test to measure renal function.
Freedom To Speak Up Guardian	Independent support and advice to staff who want to raise concerns.
HCPC	Health and Care Professions Council. The HCPC has four main functions. In the context of this document, the main function is to keep a register of professionals, known as 'registrants' who meet the required standard.
HSIB	Healthcare Safety Investigation Branch. Conducts independent investigations of patient safety concerns in NHS-funded care across England.
IPEM	Institute of Physics and Engineering in Medicine.

APPENDIX

Glossary of Terms and Abbreviations for QSI and QSIN

IR(ME)R	The Ionising Radiation (Medical Exposure) Regulations 2017 and the Ionising Radiation (Medical Exposure) Regulations (NI) 2018.
IRR	Ionising Radiation Regulations.
Machine Learning	Computer algorithms that improve automatically through experience, and by the use of data.
MDT	Multidisciplinary Team.
MP&S	Meeting patients, carers and staff. (Identified evidence sources within the QSI).
MPE	Medical physics expert. An individual having the knowledge, training and experience to act or give advice on matters relating to radiation physics applied to medical exposure.
MHRA	The Medicines and Healthcare products Regulatory Agency. It regulates medicines, medical devices and blood components for transfusion in the UK.
MRRP	Magnetic resonance responsible person. Day-to-day responsibility for safety. Provides continuity and consistency for the ongoing safe working practices of the department.
MRSE	Magnetic resonance safety expert. Provides scientific advice to MR units including advising and monitoring of local safety procedures. Usually a medical physicist who is a HCPC registered clinical scientist.
Network	A group of organisations working together and sharing experiences and learning for a common purpose. Each organisation remains independent from each other for its accountability and corporate governance.
NICE	National Institute for Health and Care Excellence.
PACS	Picture archiving and communication system. At its basic level, it is a system for storing and managing digital images. See also RIS.
PGD	Patient group direction. Written instructions for a qualified healthcare professional to supply or administer medicines to patients.
Projectile zone	An area around a magnet within the MR unit where there is a risk arising from ferromagnetic portable objects becoming attracted by the magnet.
Provider	A health or social care organisation which provides services to patients.
QRS	Quality review service.

APPENDIX

Glossary of Terms and Abbreviations for QSI and QSIN

QS	Quality statement.
RCR	Royal College of Radiologists.
RIS	Radiology information systems. A networked software system for managing medical images and associated data. See also PACS.
RPA	Radiation protection adviser. Competent to advise employers on the safe and compliant use of Ionising Radiations. The post is a legally recognised position and is a requirement of the Ionising Radiations Regulations 2017.
RWA	Radioactive waste adviser. A specialist in radioactive waste disposal and environmental radiation protection.
